q The present invention describes composition of matter (I) comprising an (X) The present invention describes composition of matter (I) comprising an (X) The TPI-(X2D, where: FI = an Fc domain, I and X2 = are each idependently selected from -(II)-C-PI-(II)-C-PI-(I2)d-P2.

(LI)-C-PI-(LZ)d-P2-(L3)e-P-3, or -(L1)-C-PI-(L2)d-P2-(L3)e-P3-(L4)f-P4 (M) and P4 = are each independently sequences of paramacologically active peptides: LI, LZ, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombois, or autoimmune diseases.

The use of an Fc domain (rather than a Fab domain) can provide a longer control in composition and provide and incition and possibly placental transfer. AAA69443

The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA6942 to AAA69526 and AAB18095 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes composition of matter (I) comprising an Kr domain, pharmacologically active peptides, and linkers. Where (I) is: (X1a-Fr-(X2)b, where FI = an Fc domain, X1 and X2 = are each independently selected from -(L1)C-P1, -(L1)C-P1-(L2)d-P2, -(L1)C-P1-(L2)d-P2, -(L3)e-P3, or -(L1)C-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 pharmacologically active peptides; L1, L2, and L4 = are each independently sequences of pharmacologically active peptides; L1, L2, and f = are each independently independently linkers; and a, b, c, d, e, and f = are each independently or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are
                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EPO; TPO; CTLA4; mimetic; IL-1; TNF; antagonist; MMP; inhibitor; eythropoietin; thrombopoietin; interleukin 1; cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase;

The present invention describes composition of matter (I) comprising an FC domain, pharmacologically active peptides, and linkers. Where (I) is:

(X1)a-F1-(X2)b, where: F1 = an FC domain; X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P2, -(L2)d-P2, (L1)d-P2, (L3)d-P2, (L3)d-P2, (L3)d-P2, (L3)d-P2, (L3)d-P2, (L3)d-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4, where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides: L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently or provided that at least 1 of a and b 1s 1. The composition can activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an FC domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as FC receptor binding, protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ä

to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Fe domain, pharmacologically active peptides, and linkers. Where [1] is: (X1)a-F1-(X2)b, where F1 = an Fe domain, X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, (L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibily placental transfer. AAA69443 to AAA69526 and AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes composition of matter (I) comprising an K10a-r1-(X2)b, where F1 = an Fc domain, X1 and X2 = are each independently selected from -(L1)c-P1-(L2)d-P2, (L3)e-P2, (L3)e-P2, (L3)e-P2, (L3)e-P2, (L3)e-P3, or -(L1)c-P1-(L2)d-P2, (L3)e-P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, c, d, e, and f = are each independently novided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are
                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                       Modified peptide; therapeutic agent; fusion; Fc domain; cancer; autolmunne disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EPO; TPO; CTLA4; mimetic; IL-1; TNF; antagonist; MMP; inhibitor; erythropoietin; thrombopoietin; interleukin 1; vyctocxaic Techl Lymphocyte antigen 4; tumour necrosis factor; vascular endochbilal growth factor; matrix metalloproteinase; asthma; thrombosis; pharmaceutical.

The present invention describes composition of matter (I) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (I) is:

(X1)a-FI-(X2)b, where: FI = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-PI-(L2)d-P2,

-(L1)c-PI-(L2)d-P2-(L3)e-P^3, or -(L1)c-PI-(L2)d-P2-(L3)e-P3-(L4)f-P4,

where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently of or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases.

The use of an Fc domain (rather than a Fab domain) can provide a longer
useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69256 and AAB16955 to AAAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Modified peptide; therapeutic agent; fusion; Fc domain; cancer; autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EPO; TPO; CTLA4, minetic; IL-1; TNF; antiagonist; MMP; inhibitor; erythropoietin; thrombopoietin; interleukin i; cytocoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase;

```
The present invention describes composition of matter (I) comprising an Fe domain, pharmacologically active peptides, and linkers. Where (I) is:

(X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1-(L2)d-P2-(L3)d-P2-(L3)e-P3-(L4)f-P4-(L2)d-P2-(L3)e-P3-(L4)f-P4-(L2)d-P2-(L3)e-P3-(L4)f-P4-(L2)d-P2-(L3)e-P3-(L4)f-P4-(L3)e-P3-(L4)f-P4-(L3)e-P3-(L3)e-P3-(L4)f-P4-(L3)e-P3-(L3)e-P3-(L4)f-P4-(L3)e-P3-(L3)e-P3-(L4)f-P4-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L4)f-P4-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L4)f-P4-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3-(L3)e-P3
                                                                                                                                                                                                                              ij
                     AAA69443
                     A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69226 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
half-life or incorporate functions such as Fc receptor binding, protein a binding complement fixation, and possibly placental transfer. AAA694

O or 1, provided that at least 1 of a and b is 1. The composition can activities. ONRs. vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fr domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fr receptor binding, protein to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.

activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Fc domain, pharmacologically active peptides, and linkers. cc vhcre Pl. P2, P3, and P4 = are each independently sequences of where Pl. P2, P3, and P4 = are each independently sequences of paramacologically active peptides; Ll, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently of or l, provided that at least l of a and b is l. The composition can of or l, provided that at least l of a and b is l. The composition can activities. DNAs, vectors and host cells from the present invention can activities. DNAs, vectors and host cells from the present invention can activities. DNAs, vectors and host cells from the present invention can serial for treating pharmaceutical compositions. The compositions are composited for the use of an FC domain (rather than a Fab domain) can provide a longer the use of an incorporate functions such as Fc receptor binding, protein a binding, complement fixation, and possibly placental transfer. AAA69443 because used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes composition of matter (I) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1, -(L3)c-P1-(L2)d-P2, -(L3)d-P2, -(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Modified peptide; therapeutic agent; fusion; Fc domain; cancer; autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EPO; CTLA4; minetic; IL-1; TNF; antagonist; man; inhibitor; erythropoietin; thrombopoietin; interleukin is cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and

The present invention describes composition of matter (1) comprising an Fr domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1-(L2)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2
pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, thrombolytic and immunosuppressive have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNBA, vectors and host cells from the present invention can activities. DNBA, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autolimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer The use of an Fc domain (rather than a Fab domain) can provide a longer thalf-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Modified peptide; therapeutic agent; fusion; Fc domain; cancer; autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EPO; TPO; CTLA4; mimetic; IL-1; TNF; antagonist; MMP; inhibitor; erythropoiethi; thrombopoletin; interleukin 1; vyctocxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothedial growth factor; matrix metalloproteinase; asthma; thrombosis; pharmaceutical.

O or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB18095 to AAAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Thrombopoietin; mimetic; TMP; TPO; platelet; megakaryocyte; production; anti-human immunodeficiency virus; anti-HIV; anti-anemic; dermatological; immunosuppressive; anti-inflammatory; linker; cyclic; linear.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Thrombopoietic peptides which activate mpl receptors and increase the production of platelets or platelet precursors, useful for treatment of diseases which involve thombocytopenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A compound which binds to an mpl receptor comprising a thrombopoietin mimetic peptide (TMP) dimer joined by a linker [TMP_1-(L_1)_nTMP_2], is new. TMP_1 and TMP_2 are amino acid sequences varying from at least
                                                                                                                                                                                                                                                   Gaps

pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently of or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor blaiding, protein half-life or incorporate functions such as Fc receptor blaiding, protein A binding, complement fixation, and possibly placental transfer. AAA6944 to AAA69526 and AAB18091S to AAAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes composition of matter (I) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-rl-(X2)b, where Fl = an Fc domain, X1 and X2 = are each independently selected from (Li)o-Pl-(Li)o-Pl-(Li)d-P2, (Li)e-P1-(Li)d-P2, (Li)e-P1-(Li)e-P1-(Li)e-P3 (Li)e-P4 (Li)e-P1-(Li)e-P1-(Li)e-P3 (Li)e-P4 (Li)e-P1-(Li)e-P3 (Li)e-P4 (Li)e-P1-(Li)e-P3 (Li)e-P4 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The present invention describes composition of matter (I) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an Fc domain, X1 and X2 = are each independently selected from -(L1)c-P1-(L2)d-P2, (L3)d-P2, (L3)d-P3, (L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently or 1, provided that at least 1 of a and b is 1. The composition can cartivities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (tather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, torbeln the activities or incorporate functions such as Fc receptor binding, complement fixation, and possibly placental transfer. AAAA6943 to AAAA69526 and AABI6955 to AABI8003 represent invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EPO; TPO; CTLA4: mimetic; IL-1; TRF; antagonist; MMP; inhibitor; erythropoietin; thrombopoietin; interleukin 1; cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Modified peptide; therapeutic agent; fusion; Fc domain; cancer;

The present invention describes composition of matter (1) comprising an FC domain, pharmacologically active peptides, and linkers. Where (I) is:

(X1)a-F1-(X3)b, where: F1 = an FC domain; X1 and X2 = are each independently selected from -(L1)C-F1-(L2)d-F2.

(L1)c-F1-(L2)d-F2-(L3)e-P^3, or -(L1)C-F1-(L2)d-F2-(L3)e-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently inkers; and a, b, c, d, e, and f = are each independently inkers; and a, b, c, d, e, and f = are each independently linkers; and as b, 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, promplement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB180303 represent uncleotide and amino acid considered and the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Immunoglobulin; IgGl; Fc; thrombopoietin; mimetic; TMP; TPO; platelet; megakaryocyte; production; anti-human immunodeficiency virus; anti-HIV; anti-anaemic; dermatological; immunosuppressive; anti-inflammatory.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A compound which binds to an mpl receptor comprising a thrombopoietin mimetic peptide (TMP) dimer joined by a linker [TMP_1-(L_1)_nTMP_2], is new, TMP_1 and TMP_2 are amino acid sequences varying from at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Thrombopoietic peptides which activate mpl receptors and increase the production of platelets or platelet precursors, useful for treatment c diseases which involve thombocytopenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        qq
                                                                                                                                                     The present invention describes composition of matter (I) comprising an FC domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an FC domain, X1 and X2 = are each independently selected from -(L1)-C-P1-(L2)d-P2.

-(L1)c-P1-(L2)d-P2-(L3)e-P^3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2. P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18033 represent uncleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Thrombopoletic peptides which activate mpl receptors and increase the production of platelets or platelet precursors, useful for treatment of diseases which involve thombocytopenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    megakaryocyte; production; anti-human immunodeficiency virus; anti-HIV; anti-anaemic; dermatological; immunosuppressive; anti-inflammatory.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Immunoglobulin; IgG1; Fc; thrombopoietin; mimetic; TMP; TPO; platelet;

was then fused in-frame to the FC region of the human IgG1 chain (see Axy96529). A compound which binds to a mpl receptor comprising a TWP dimer joined by a linker [TWP1-(L1), nWP2], is new. TWP1 and TWP2 are amino acid sequences varying from at least 10 to 14 residues in length comprising X-2X_1-1, X-2X_1-2, X-2X_1-4, X-1-X_1-X, X-1-X_1-X, X-1-X_1-X, X-1-X_1-4, X-1-X_1-X, X-1-X_1-4, X-1-X_1-X, X-1-X_1-4, X-1-X_1-X, X-1-X_1-4, X-1-X_1-4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Modified peptide; therapeutic agent; fusion; Fc domain; cancer; autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EPO; TPO; CTLA4; mimetic; IL-1; TNF; antagonist; MMP; inhibitor; erythropoietin; thrombopoietin; interleukin 1; cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and

The present invention describes composition of matter (I) comprising an FC domain, pharmacologically active peptides, and linkers. Where (I) is:

(X1)a-F1-(X2)b, where: F1 = an FC domain; X1 and X2 = are each independently selected from -(L)-C-F1, -(L)-C-F1-(L2)d-F2.

(L1)c-P1-(L2)d-P2-(L3)e-P^3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2. P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can bave cytostatic antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention are useful for treating pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (tather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69526 and AAB18055 to AAB18003 represent invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

The present invention describes composition of matter (1) comprising an Ec domain, pharmacologically active peptides, and linkers. Where (1) is:

(X1)a-PI-(X2)b, where: FI = an Fc domain; XI and X2 = are each independently selected from -(L1)c-PI-(L2)d-P2.

(L1)c-PI-(L2)d-P2-(L3)e-P^3, or -(L1)c-PI-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein and Abile95s to Aball 803 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive: EPO; TPO; CTLA4; mimetic; IL-1; TNF; antagonist; MMP; inhibitor; erythropoietin; thrombopoietin; interleukin 1; cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase; asthma; thrombosis; pharmaceutical.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes composition of matter (I) comprising an Ex domain, pharmacologically active peptides, and linkers. Where (I) is:

(X1)a-F1-(X2)b, where: F1 = an Fc domain, X1 and X2 = are each independently selected from -(L1)C-F1-(L2)d-P2.

(X1)c-F1-(L3)d-P2-(L3)e-P3, or -(L1)C-P1-(L2)d-P2.

(X1)c-F1-(L3)d-P2-(L3)e-P3, or -(L1)C-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides, L1, L2, L3, and L4 = are each independently inhers; and a, b, c, d, e, and f = are each independently controlled that at least 1 of a and b is 1. The composition can each interpretation and inmunosuppressive activities. DNAs, wectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases.

CC be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases.

CC he use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein constructions and possibly placental transfer. AAA69443 complement fixation, and possibly placental transfer. AAA69443 commonser used in the example of the manner of the example of the manner of the example of the example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Thrombopoietin; mimetic; TMP; TPO; platelet; megakaryocyte; production; anti-human immunodeficiency virus; anti-HIV; anti-anemnic; dermatological; immunosuppressive; anti-inflammatory; linker; cyclic; linear.

A compound which binds to an mpl receptor comprising a thrombopoietin mimetic peptide (TMP) dimer joined by a linker [TMP_1-(L_1)_nTMP_2], is new. TMP_1 and TMP_2 are amino acid sequences varying from at least 10 to 14 residues in length comprising x_2 - x_{-1}, x_3 - x_3, and x_4 - p, x_2 - x_3 - x_3, x_3 - x_3, x_4 - p, x_2 - x_3, x_3 - x_
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         thrombopoietin. The TMPs are useful for increasing the production of platelets or platelet precursors (e.g. megakaryocytes) in a mammal, which is useful for treatment of diseases which involve thombocytopenia, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Thrombopoietin; mimetic; TMP; TPO; platelet; megakaryocyte; production; anti-human immunodeficiency virus; anti-HIV; anti-anemic; dermatological; immunosuppressive; anti-inflammatory; linker.
Thrombopoietic peptides which activate mpl receptors and increase the production of platelets or platelet precursors, useful for treatment of diseases which involve thombocytopenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              aplastic anaemia, immune thrombocytopenia (ITP), human immunodeficiency virus associated ITP, and systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Peptide
```

```
The present invention describes composition of matter (I) comprising an FC domain, pharmacologically active peptides, and linkers. Where (I) is:

(X1)a-FI-(X2)b, where: FI = an FC domain; XI and X2 = are each independently selected from -(L1)C-FI-(L2)G-F2.

Novel composition of matter comprising an Fc domain and

·;

```
The present invention describes composition of matter (I) comprising an CC Fc domain, planmacologically active peptides, and linkers. Where (I) is:

(X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1-(L2)d-P2.

(L3)c-P1-(L2)d-P2.

(L3)d-P2. (L3)d-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4.

(C) planmacologically active peptides: L1, L2, L3, and L4 = are each independently sequences of independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and b, c, d, e, and f = are each independently linkers; and host cells from the present invention can carrivities. DRAS, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases.

(C) the use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein complement fixation, and possibly placental transfer. AAA69443

(C) sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Modified peptide; therapeutic agent; fusion; Fc domain; cancer; autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EPO; TPO; CTLA4, minetic; IL-1; TNF; antagonist; MMP; inhibitor; erythropoietin; thrombopoietin; interleukin i; cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloprotelnase;

The present invention describes composition of matter (I) comprising an FC domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-P1-(X2)b, where: FI = an FC domain, X1 and X2 = are each independently selected from -(L1)c-P1-(L2)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Thrombopoietin; mimetic; TMP; TPO; platelet; megakaryocyte; production; anti-human immunodeficiency virus; anti-HIV; anti-anemic; dermatological; immunosuppressive; anti-inflammatory; linker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                      Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .;

-!- FUNCTION: MAY HAVE A ROLE TO PLAY IN FORMATIVE EVENTS IN OVULE AND EMBRYO MORPHGENESIS.

-!- SUBCELLULAR LOCATION: Nuclear (Probable).

-!- SUBCELLULAR SPECIFICITY: UBIQUITOUSLY EXPRESSED IN THE MATURE PLANT.

-!- SIMILARITY: BELONGS TO THE TALE/KNOX FAMILY OF HOMEOBOX PROTEINS.
